

July 1, 2003

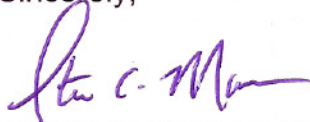

To Whom it May Concern:

Rockwell Engineering & Construction Services, Inc. (Rockwell E&C) provided spill assessment and cleanup services for Whitewater Engineering Corporation (WEC) during our Power Creek Hydroelectric Project in Cordova, Alaska. These services included coordinating with ADEC, Cordova Electric, and ADF&G, writing work plans, overseeing cleanup in accordance with the WP, completing soil and water testing, and writing all reports.

Mark Rockwell and Susan Vogt of Rockwell E&C responded immediately when first contacted in December 2000 and provided continuing services to the project's completion in 2003. Rockwell E&C performed well during repeated trips to a remote location under sometimes extreme and constantly changing weather conditions. They controlled project costs while completing their work effectively. They met their specific project objectives of completing work with no silt plumes and no petroleum sheen.

Rockwell E&C is a professional group that provided WEC with exceptional field service and comprehensive reports. We would contract them for future projects and we recommend them to other firms without hesitation.

Sincerely,

Steven C. Marmon, V.P.
Project Manager
